

The new One Button Download is a feature that will allow you to do an automatic download and installation of the most recent version of WolfePak from the WolfePak FTP site. After the download is complete it will automatically rebuild all company data files that have changed. This procedure does require an internet connection (preferably a high speed connection).

1. From the Drop Down Menu select "Utilities":

Tip: Start the One Button Download at the end of the day before you go home. Yes, you can start the download, leave the office, and when you return your download is complete and all files that needed to be rebuilt are completed! You no longer have to remember the program drive letter or folder location.....the system does it all for you!

2. On the "Global" option expand the menu by clicking on the plus (+) symbol, then select menu option #91 "System Authorization"

WolfePak Download/Install Utility							
This will Download and Install the latest version of the WolfePak software.							
Done 1. Ensures that the License information is up to date (Done) Done 2. Loads authorized program list for the current license (DOS and Windows version) Done 3. Connects to WolfePak ETP Site							
Done 4. Determines which programs need to be downloaded	Troub						
In-Progress => 5. Downloads the necessary programs from the WolfePak FTP Site							
6. Unzips the new WolfePak program files	ooti						
Does a backup of the original program files	рg						
Installs the new program files to the GL4 directory							
9. Runs WolfePak Global Utility to perform automatic rebuild for modified files							
Status of the file currently being downloaded: ====>Transferred: 5799936 of 10422566 bytes							

The system will now automatically download and install the latest version of WolfePak for Windows software. The first time you run the download it will take a little longer because it will have to copy every program you are licensed for. The next time you run the utility, the system will only download program files from WolfePak's FTP server if they are newer than the corresponding files that were downloaded previously.

After the program is successfully installed an automatic rebuild for any modified files will occur automatically.

Error		X	1
8	One or more users are still in the system (se Please have all other users exit out of the sy and Try Again later).		
	The following users are in the system: Karen, Karen		
	<u>Retry</u> <u>Cancel</u>		
		If you receive this error message it means it is unable to complete the update because someone else is still in the system. It will automatically retry to update the files periodically until the update is complete or you can chose to go around and exit everyone and then click on the "retry" button manually.
